

Order Processing

The software for integrated order processing and stock management

Order Processing forms the core of the integrated Abacus Business Software.

Order Processing, together with the programs for Service and Project Management, Production Planning and Control, Service and Contract Management and Financial Software with Cost Accounting, form a complete and integrated solution.

The continuity from order processing to financial accounting supports efficient workflows. Purchasing and ordering as

well as stock management complement the scope of services. This allows you to significantly reduce administrative efforts and costs.

E-Commerce

The Abacus Webshop, which is seamlessly integrated into the Abacus Business Software, is ideal for online commerce.

Electronic data exchange

The option for electronic data exchange is already built into Order Processing. This eliminates manual entry of orders and the exchange of documents is paperless. This benefits purchasing and sales departments and, since invoices are sent and received electronically, also the accounting department.

Order Processing at a glance

Master data

- Article and service master data
